EDUCATION

Kalyani Government Engineering College

Bachelor of Technology (B.Tech) in Electronics and Communication Engineering

Kalyani, Nadia

Aug. 2024 – May 2028

EXPERIENCE

KGEC Robotics Society Member

Kalyani Government Engineering College

June 2025 – Present

Kalyani, Nadia

- Assisted in robotics and embedded systems activities, gaining hands-on exposure to electronics projects.
- Conducted technical seminars and workshops on robotics, IoT, and basic embedded systems.
- Collaborated with peers on technical discussions, demonstrations, and knowledge-sharing sessions.

PROJECTS

Smart Security System | Python(Flask, NumPy, Pillow), Embedded Systems, IoT

A cost-effective smart door security solution combining hardware access control with remote monitoring.

- Built a smart door security system with keypad authentication, Bluetooth unlocking, and real-time camera monitoring using Arduino UNO.
- Integrated ESP32-CAM modules from Espressif Systems to capture images on failed access attempts.
- Developed a Python Flask backend for automated email alerts with captured security images.

Task Management Web App | Node.js, Express, MongoDB, React, JWT Authentication

Developed A secure full-stack to-do web application with authentication and real-time task management.

- Built REST APIs using Express with MongoDB for data storage, JWT authentication, and bcrypt password security.
- Developed React frontend with login/register flow and full task CRUD functionality.
- Implemented cookie-based authentication, protected routes, and deployment-ready backend configuration.

Face Recognition Attendance System | Python, Flask, React, MongoDB, OpenCV

Developed A web-based attendance platform using facial recognition for automated and contactless tracking.

- Developed Python backend with face recognition using OpenCV for automated attendance capture.
- Built responsive frontend dashboard with React for real-time attendance monitoring.
- Integrated MongoDB for secure storage of user profiles and attendance records.

TECHNICAL SKILLS

- Languages:** Python, C/C++, SQL, JavaScript, HTML/CSS,
- Frameworks:** React, Node.js, Flask, Express, WordPress, Material-UI, FastAPI
- Developer Tools:** Git, Postman, VS Code, Arduino Uno
- Others :** NumPy, Matplotlib, Pandas, MongoDB, OpenCV, Python-based data analysis, basic model building using TensorFlow, PyTorch, and Scikit-learn, data preprocessing and visualization, Arduino-based microcontroller development, ESP32 modules, sensor interfacing, basic hardware debugging.
